

Project Description

Project Name: Glory Cookware

This project focused on developing a comprehensive **Digital Marketing Strategy** for **Glory Cookware** with the main objectives of increasing **brand awareness**, improving customer engagement, and driving sales.

The project began with a **Company Overview**, where we introduced the brand, its **Vision**, **Mission**, and overall business background to gain a clear understanding of the company.

Next, we conducted **Market Research**, including a **PESTEL Analysis**, to evaluate the external environment and identify market opportunities and challenges. This was followed by **Marketing Research** and a **Competitor Analysis** to understand customer behavior, market trends, and competitors' strengths and weaknesses.

We then performed a **SWOT Analysis**, developed a **Business Model Canvas**, and analyzed the company's **7Ps Marketing Mix** to assess its current marketing position and identify areas for improvement.

After completing the research phase, we moved to the **SOSTAC Framework**, starting with the **Situation Analysis** to summarize the company's current position. We then established clear **Objectives** based on the **5S Model** (Sell, Serve, Speak, Save, and Sizzle).

The next step was developing the overall **Strategy**, which included **Segmentation, Targeting, and Positioning (STP)**, creating a detailed **Buyer Persona**, designing the **Marketing Funnel**, selecting the most effective **Marketing Channels**, and defining the brand's **Marketing Messages**.

Following the strategy, we developed the **Tactics**, outlining the digital marketing activities and campaign execution plan.

Finally, we created the **Control** section by defining the **KPIs**, performance measurement methods, and monitoring process to evaluate the success of the strategy. The project concluded with a detailed **two-month Content Plan**, including different content types and formats designed to support both **brand awareness** and **sales objectives** across social media platforms.
